

ABSTRACT:

5 A device (100) presents to a user information about programs that are selected from a number of programs. The selection is done by a selection unit 112 on the basis of a program genre specified by the user. To this end, each program has a label that identifies the genre of that program and the user specifies a label that corresponds with the currently preferred genre. According to the invention, the device (100) has a label assignment unit (116) with which the user can assign a label (606) to a program genre (601). In this way, the user can choose or create a personal label for a program genre.
